

# Welcome back — HumanInTheLoop AI

"AI should be my partner, not my replacement — I'm here to build real systems." Your program, your pace, your proof.

CURRENT WEEK

## Current Week: Week 1 — AI & Computational Thinking

Foundations

Before you write a line of code, understand what AI is, what it isn't, and how to think like an engineer.

### Next Lesson

What is AI? History and hype-cycle honesty

Project: AI Concept Explorer

## Skills Unlocked So Far

Computational thinking

## The Mission

I'm doing this on my own, and I refuse to be left behind as AI keeps evolving. I want to learn by doing — practicing, building, failing, debugging, and understanding until it sticks. I want AI to be my partner, not my replacement, as I build real systems. My goal is to become genuinely capable, then keep growing on a lifelong journey toward true expertise.

This is not a course to finish. It's a system to run for years. See the Lifelong Learning tab once you graduate Week 16.
